Using this Tool, A key rule of thumb in writing is to express ideas in the active voice rather than the passive. Understanding what constitutes a sentence's passive form can help identify and correct instances of passive voice. This tool provides suggestions for rewriting sentences from active to passive voice, though please note that it is still under development and may not always produce accurate results. To utilize this feature, enter your desired text into the input box above and click the "Rewrite" button to receive one or more suggestions. For those looking to integrate similar functionality into their own applications, contact us about Sapling's API. The concept of voice in writing refers to how an action is presented within a sentence. Essentially, it clarifies what the subject is doing by establishing the relationship between the verb and its associated subject. Proper use of both active and passive voice, along with grammar, spelling, and punctuation, ensures that written content remains clear and understandable. Active voice tends to yield clearer sentences than their passive counterparts but may necessitate repeating information to engage readers effectively. On the other hand, using passive voice can avoid unnecessary repetition at the cost of potentially longer sentences that might lose reader interest. Therefore, it's crucial to choose between active and passive voices wisely based on the content's context. One common pitfall is over-relying on passive voice, which can result in confusing writing styles and demonstrate weak writing skills. Fortunately, tools like Scalenut’s AI-powered converter can be a valuable resource for writers by analyzing sentences and suggesting active voice rewrites without requiring extensive manual revisions. Scalenut’s active to passive voice converter leverages advanced technology and comprehensive training modules to change active voice to passive voice efficiently. It is particularly useful in various contexts, such as scientific writing, professional communication, and reporting content, by converting active sentences into their passive equivalents. Want to covert activ to passiv in our converter tool? Click on 'Generate' and let Scalenut's AI do the magic! Review the results, check output suggestions, and use them to improve your content. Easy peasy! Scalenut's powerful AI creates clear and concise passive voice sentences. Now that you know how our free active to passive voice converter works, let's dive deeper into the process of converting active to passive. **Converting Active Voice to Passive** Step 1: Move object to subject slot Active: Emma reads the book. Passive: The book is read by Emma. Step 2: Place subject in 'by' phrase Active: The manager writes the report. Passive: The report is written by the manager. Step 3: Add auxiliary verb and past participle form Active: The teacher teaches the students. Passive: The students are taught by the teacher. **What's Active and Passive Voice?** Active voice has a clear tone, focusing on the subject performing an action. We use active when we focus on who's doing something. Passive voice focuses on the target of the action, with the verb acting upon the subject. It's subtle compared to active voice. We use passive voice when the emphasis is on what's happening rather than who's doing it. Passive voice conveys objectivity and minimizes emphasis on the doer. **Active to Passive Voice Examples** Use our converter to change active sentences into passives! In active, focus is on the subject; in passive, it's on the action. Examples of Active Voice: 1. Tom is writing a letter. 2. The research team found valuable insights. 3. We are launching a new product. Examples of Passive Voice: 1. A letter is being written by Tom. 2. Valuable insights were found by the research team. 3. A new product is launched by us. How do we spot Active Voice and Passive Voice? In Active Voice sentences, the structure is Subject + Verb + Object. Here, the subject acts on an object. Think Active Voice sentences always start with the subject. In contrast, Passive Voice sentences are structured as Object + Verb + Subject. Here, the focus lies more on the action than the subject. To identify a passive voice sentence, look for past participles following 'to be' directly in a sentence. When to use Active and Passive Voice? Active Voice is perfect for clear writing: * Emphasize the subject of the sentence. * Deliver clear instructions without sounding wordy. * Eliminate ambiguities related to responsibilities. * Non-scientific writing. * Write shorter, authoritative, and easy-to-understand sentences. Passive Voice, on the other hand, suits scientific and academic writing: * Emphasize what happened (action), not who did it (doer). * If the doer is unknown. * Keep the focus consistent across various sentences. * Avoid putting responsibility on one person. * Appear objective, scientific, technical, or logical. Use Scalenut's Active to Passive Converter Tool to change your content's voice and communicate ideas more effectively. The tool helps you scale your content by making the most of AI technology.
